

Urine Collection Kit

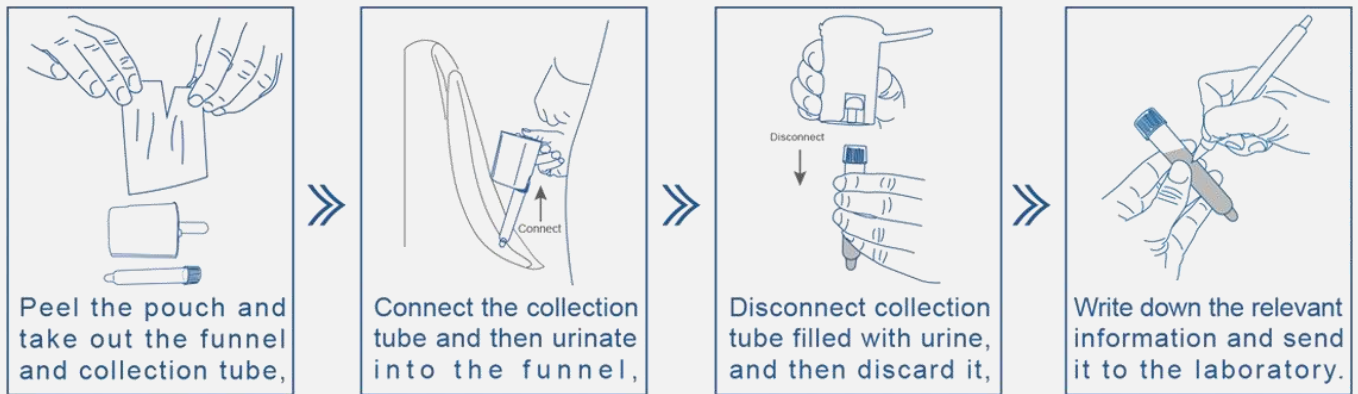

Urine Collection Kit is a medical device that is used to collect, preserve and transport urine samples for testing and research purpose, which plays a crucial role in detecting various medical conditions such as urinary tract infections, kidney diseases, and diabetes. An urine collection kits typically include a urine sampling funnel and a urine collection tube. The kits find application in diverse settings including households, hospitals, and laboratories.

Collection Instructions

1. Wash your hands, peel the pouch and take out the urine collection kit;
2. Connect the collection tube and then urinate into the funnel;
3. Disconnect collection tube filled with urine, and then discard it;
4. Write down the relevant information and send it to the laboratory.
